EDUCATION

Luther College

Bachelor of Arts in Computer Science, Minor in Data Science

Decorah, IA

Aug. 2022 – May 2026

EXPERIENCE

Software Engineer Intern

Feb. 2026 – May 2026

Mayo Clinic

Rochester, MN

- Engineered a secure, multi-tenant REST API for collaborative DICOM medical image processing across healthcare and government providers
- Implemented OAuth2/JWT authentication and role-based access control (RBAC) across four roles to enforce data-privacy compliance
- Added per-IP rate limiting, audit logging, and OpenAPI/Swagger documentation, and containerized the full stack with Docker
- Designed REST endpoints for a blind study workflow and clinician-led diagnostic dataset annotation

Data Research Analyst

Oct. 2023 – Feb. 2026

Kingland Systems

Clear Lake, IA

- Built automation pipelines and data-validation services for high-volume entity-resolution workflows
- Executed quality-assurance initiatives that improved dataset accuracy and processing efficiency
- Collaborated cross-functionally in an Agile delivery environment to maintain data-quality and governance controls

Teaching Assistant: Intro to Computer Science

Aug. 2024 – Dec. 2024

Luther College

Decorah, IA

- Led weekly tutoring sessions on core CS fundamentals, including object-oriented programming in Java
- Provided one-on-one guidance to strengthen problem-solving skills and reinforce course material
- Collaborated with the professor to track student progress and clarify challenging topics

PROJECTS

Process API Service | Java, Spring Boot, REST, OAuth2/JWT, JUnit, Docker

2026

- Built a Spring Boot Process API exposing versioned REST endpoints that orchestrate calls across downstream services
- Secured endpoints with OAuth2/JWT and added resiliency patterns, request validation, and OpenAPI documentation
- Wrote JUnit and behavior-driven API tests and containerized the service with Docker for CI

Kuonix (Senior Capstone, Team of 3) | Next.js, TypeScript, Local-first Architecture

Aug. 2025 – May 2026

- Built a local-first workflow tool for high-volume photography to optimize RAW image triage before batch editing
- Designed issue-aware sorting for exposure, white balance, contrast, and color correction to cut manual review
- Collaborated in a three-person team to deliver the Computer Science senior capstone; live at kuonix.bhanni01.workers.dev

RewriteKit | Next.js, REST APIs, OpenAI API, Prompt Engineering

2025

- Developed structured AI workflows behind REST endpoints to transform rough text into LinkedIn posts, emails, prompts, and summaries
- Built a table-aware workspace with iterative refinement actions for controlled content generation
- Designed a scalable freemium model with optimized API usage to minimize cost while maintaining performance
- Link: rewritekit.vercel.app

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (PostgreSQL), JavaScript, TypeScript, HTML/CSS, R

Frameworks: Spring Boot, React, Node.js, FastAPI, Flask, JUnit

API & Backend: REST API design, OAuth2 / JWT, OpenAPI/Swagger, RBAC, rate limiting, resiliency patterns

Developer Tools: Git, Docker, Kubernetes, AWS, Google Cloud Platform, Postman, JIRA, CI/CD

Practices: Agile / SAgile, API lifecycle & governance, microservices, enterprise integration

Libraries: Pandas, NumPy, Matplotlib, Seaborn, SciPy, Express
